

# **WP SHARE IT NOW USER'S GUIDE**

## **WP Share It Now Documentation**

**WP Share It Now** is an easy-to-use, newbie-friendly plugin that will allow you to finally send viral traffic to your blogs, increase your sales, and it will even build a responsive list for you. . The share widget contains a link to a landing page for instance, and is only accessible if the users shares it first.

It works in a very easy way...To put it simply, you only have to incentivize your visitors with a free offer and they will "pay" you with a share in Google, Twitter or Google+.

Also, you can add coupons or discounts!

**Note:** This plugin comes with a lite version where the following options are not available to customize the objects created: General Settings Widget, Default Display, Enable Cookies, Scroll Show, Animation Speed and Audio.

- I. General Settings.** This section contains the basic information and the display options of the share object.
- **Name.** Supply this field with a unique name so you can easily identify it from the rest should you have a good number of share objects created.
  - **Status.** This switch determines whether you would like to enable the display of the share object. Turning the switch on will enable it. Turning it off on the other hand will hide it.
  - **Time Duration.** This field determines the duration of the share object being active. Click the input field to set the period the object will stay active. You can make use of the predefined options available to set your own custom range. Once it goes beyond the specified duration, the object will be hidden.
  - **Position.** This option sets the location of the share object. As of the moment, it only offers right and left positions.
  - **Default Display.** The switch allows you to setup how you would like the share object to be displayed upon page load. Selecting **Show** will expand the share object. **Hide** on the other hand collapses the share object on page load. Note that this option is not available on the lite version of the plugin.
  - **Enable Cookie.** If cookies are enabled, users who have previously and successfully shared the web page will automatically see the hidden content on subsequent visits. Note that this option is not available on the lite version of the plugin. Note that this option is not available on the lite version of the plugin.
  - **Scroll Show.** This option accepts a numerical value in pixels from the top of the page. This option allows the share object to be rendered visible only when the specified point in the field has been reached by the user upon scrolling. Note that this option is not available on the lite version of the plugin.

**II. Design Settings.** This section contains options to customize the design of the share object.

- **Background Color.** Use the built-in color picker to select the color you wish to be applied as background on your share object.
- **Border.** This field determines the design of the border that surrounds the share object. The first field accepts a numerical value in pixels that sets the thickness of the border. The built-in color picker sets what color the border is to be displayed.
- **Title Color.** Use the built-in color picker to select what color should the title(s) of the shared content be displayed.
- **Text Color.** Use the built-in color picker to choose the color to be applied to the texts of the share object.
- **Tab Background Color.** The tab referred to in this option is the tab that triggers the expand or collapse of the share object. Use the built-in color picker to select the background color you prefer.
- **Tab Color.** Use the color picker to set the color of the texts displayed in the tab including the icon.
- **Tab Icon.** Select from the wide range of icons available the icon you would like to go along with the tab text.
- **Footer Background Color.** Using the built-in color picker, choose the color you would like to apply on the footer area of your share object.
- **Footer Color.** Use the color picker to set the color of the texts in the footer section.
- **Font Size.** Determines the size of which the texts are to be displayed on the share object.
- **Font Family.** Select from the dropdown list your preferred font family to use on your share object.
- **Background Overlay.** This determines whether you would like to apply a background overlay over the main content for as long as the share object is displayed.
- **Animation Speed.** Select from the dropdown list the speed of the animation's transition. Note that this option is not available on the lite version of the plugin.

- **Audio.** Select from the available audios which one you would like to play every time the share object is displayed. Note that this option is not available on the lite version of the plugin.

### **III. Share Settings**

- **Share On.** Select from the 3 social media sharing sites you would like the users to share the content. All 3 sites are represented by their own icon and by default set to active. To hide a social media sharing site from getting displayed on the share object, click on its icon. You will know that it is not active as it will be displayed in gray.
- **Share Button Style.** Choose from the pre-designed share buttons you would like to use on the share object.

**IV. Preview.** This section previews how the share object looks and updates every time you make changes on the settings.

**V. Pre Share Content.** This section allows you to set the contents visible to the user before sharing it.

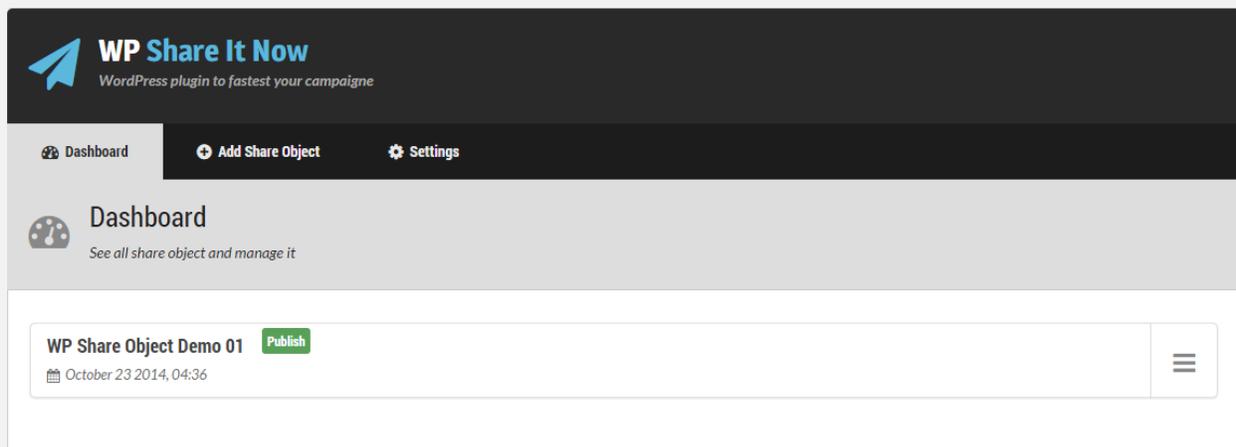

- **Title.** Supply this field with the heading of the pre-share content.
- **Info.** To be supplied with information relevant on the shared content.
- **Image.** Upload an image from your computer or use one from your media library. This image will be added below the pre-share info.
- **Share Title.** Supply in this field the heading to share.
- **Button Tab Label.** Entry in this field will be used as the label for the tab that expands and collapses the share object.
- **Footer Info.** Entry added in this field are added to the footer section of the share object.

**VI. Post Share Content.** This section allows you to set contents that will be displayed right after the content is shared.

- **Success Title.** Supply this field with the heading to be displayed after the user has successfully shared the content.
- **Success Info.** Enter in this field any information that is relevant to the content recently shared.
- **Success URL.** Supply the complete url of the page where you would like to redirect users once they click on the image or the link. The link added in this field will be embedded on the image if an image is uploaded.

3. After you have reviewed and finalized the settings and information for the share object, click **Add Object** button to publish.

## How to Manage Share Objects

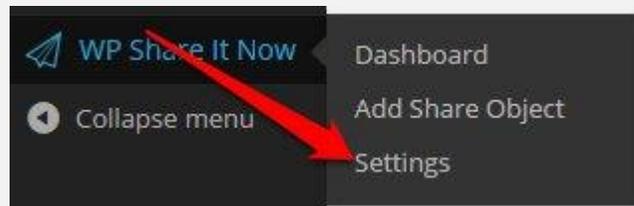

1. To manage share objects, go to the plugins dashboard which is accessible by clicking the plugin's menu item on the left admin panel.
2. Once inside the dashboard, you can see all of the share objects you have created. Each share object is displayed and represented by their name with the date when it has been published. Additionally, on the far right of each share object is an icon represented by 3 horizontal bars stacked on top of each other. This icon contains options to manage the share object.
  - Click **Edit Share Object** if you would like to make changes to a share object you previously or recently published.
  - Click the red **Delete Share Object** if you would like to delete the share object. You will be prompted to confirm your action as

deleting the share object will completely delete all settings and information set in it.

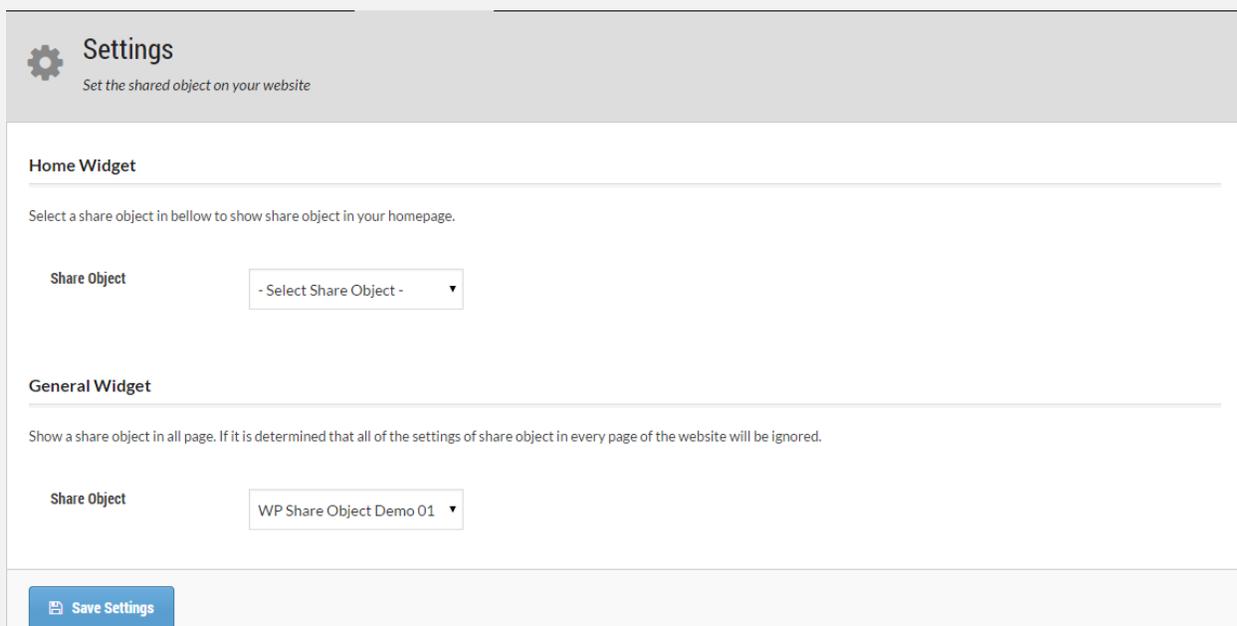

## WP Share It Now Settings

This section of the guide covers how to display the share object on your website.

1. Navigate to the WP Share It Now Settings page by hovering your cursor on the plugin's menu item on the left admin panel then click **Settings**.

2. The **Settings** page should be similar to the image below. Note that the **General Widget** section is not available to those who are using the lite version of the plugin.

A screenshot of the WP Share It Now Settings page. The page has a header with a gear icon and the text "Settings Set the shared object on your website". Below the header, there are two sections: "Home Widget" and "General Widget". The "Home Widget" section has a "Share Object" dropdown menu with the option "- Select Share Object -". The "General Widget" section has a "Share Object" dropdown menu with the option "WP Share Object Demo 01". At the bottom of the page, there is a blue "Save Settings" button.

- **Home Widget.** The share object selected under this section will only be displayed on the front page / home page of the site.
- **General Widget.** The share object selected under this section will be displayed throughout the site. Note that this is not available in the lite version of the plugin.

3. Once you have setup the share object you want to display on your site, click the **Save Settings** button to apply and implement the changes made.
