

****Instructions for Setting Up Your Resale Rights Product****

==> Note if you have never setup a resale rights product before, then I recommend first watching the "How To Setup Resale Products" video instruction included with this package.

Quick Start Guide:

Inside your 'Site Files' folder you will find the following:

- index.html - this is your sales letter
- download.html - this is the page where your customers can access their purchase (you should rename this page so it's harder to guess) – the download page is already configured to the product
- order.php – redirects to your order link
- thankyou.html – can be used to build your buyers list (optional)
- images folder - this contains all your image files
- videos folder – this contains all your video files

1. You will need a payment processor to accept payments online. Paypal.com is free to sign up and you can accept payments from all over the world and get paid instantly.

>> See below for instructions on creating a payment link inside Paypal and redirecting your customers to your download page if you don't know how to do this already.

2. Once you have your order link from your payment processor, open the order.php file and change out where it says "Your Order Link Here" with the actual order link you created and save your changes

*Note you must leave the order link inside the quotes as such: "Your Order Link Here"

3. You will need a domain name and web host to upload the files to.

If you don't have a hosting account, you can get professional, **UNLIMITED SPACE** web hosting with plans starting under \$10 per month here:

[Click Here To Register Your Hosting Account](#)

(use coupon code **webbizpro1** and get your first month for .01 penny)

4. Create a folder on your web host for this product and upload ALL of the files that are inside the "Site Files" folder to the SAME folder you created. Do NOT upload the Site Files folder itself.

The link to your sales page would then be:

<http://Your-Domain-.com/subfolder/index.html>

And the download page would be:

<http://Your-Domain-.com/subfolder/download.html>

(again you should rename the download.html file)

That's it. You should now be ready to promote your site and receive orders!

Instructions for creating a payment link inside Paypal and redirecting your customers to your download page:

Login to your paypal account

Click on the "Merchant Services" tab

Click "Create Payment Buttons" and then click "Create A Button"

Step 1: Choose a button type which is going to be "Buy Now" button. Enter Item name details (i.e. Product Name) and the Price (suggested price is \$27 but you can sell at whatever price you choose)

Step 2: Track inventory (not used)

Step 3: Customize advanced features

IMPORTANT ==> This is a digital download, not a physical product. So be sure to check the box under "Take customers to this URL when they finish checkout" and enter the web address to your download page (or to the "thank you" page if your using it to build your buyers list):

i.e. - <http://Your-Domain.com/subfolder/download.html>

Click "Create Button" and your payment code will be generated. **Next click the "Email" tab and copy the "Email link" you are provided into your order.php file where it says "Your Order Link Here" and save your changes** -- note you must leave the order link inside the quotes as such: "Your Order Link Here"

IMPORTANT ==> Do NOT paste the "Website Button Code" into your order.php file or it will not work -- Instead be sure to click the "EMAIL" tab to get your payment link. It will look something like this:

[https://www.paypal.com/cgi-bin/webscr?cmd=_s-xclick&hosted_button_id=\(series of numbers here\)](https://www.paypal.com/cgi-bin/webscr?cmd=_s-xclick&hosted_button_id=(series of numbers here))

Then simply upload your order.php file to your web host along with all your other files and you're good to go.
